## **ADVANCES IN FAT EMULSIFYING TECHNIQUES: NEW ARTICLE HIGHLIGHTS VASER Lipo**

**- Paul Jarrod Frank, M.D. pens article for the *2007 US Dermatology Review* on improvements in Liposuction with VASER® Lipo -**

**LOUISVILLE, Colo.** – “Advances in Fat Emulsifying Techniques” by Paul Jarrod Frank, M.D., founder and director of The Fifth Avenue Dermatology Surgery and Laser Center in New York City, has just been published in the *2007 US Dermatology Review* highlighting the latest in fat removal – VASER Lipo.

Dr. Frank, an esteemed dermatologist and dermatologic surgeon, draws attention to the overwhelming demand for small volume Liposuction procedures. In response to this trend, advances in technology have been made to accommodate this specific need. In his article, Dr. Frank reports that the VASER Lipo System, an ultrasound-assisted device introduced in 2001, employs smaller cannulae and an advanced, superior ultrasound technology that liquefies fat for easy, less painful removal, making fat removal of all sizes and in all areas possible.

According to Dr. Frank, not only does this unique procedure yield extraordinary results, it may offer improved tissue retraction and draping during the healing process, as well as collagen contraction that goes above and beyond the normal healing process, making VASER Lipo an alternative choice to traditional Liposuction procedures.

Readers interested in learning more about VASER technology should visit [www.vaser.com](http://www.vaser.com).

### **SOUND SURGICAL TECHNOLOGIES LLC**

A leader in ultrasound technology, Sound Surgical Technologies has earned its place in the cosmetic surgery world with innovative, patented fat removal technology, proving to be the trusted method in a

society saturated with fad procedures. Founded in 1998, Sound Surgical Technologies LLC placed its first VASER® System on the market in March 2001. More than 50,000 procedures that have been performed worldwide using the VASER System.
